

Doozer Wood

Environmentally friendly recycled

Natural Series

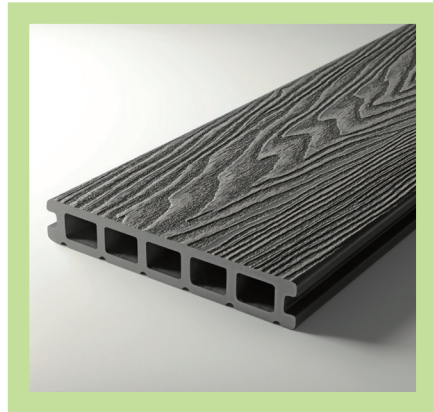

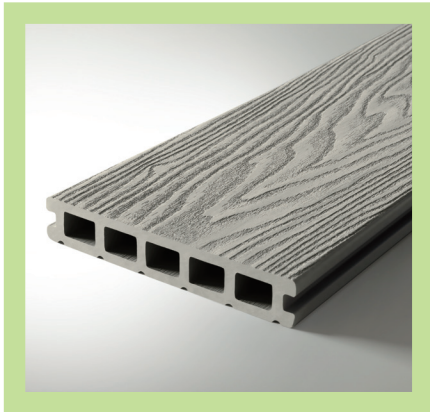

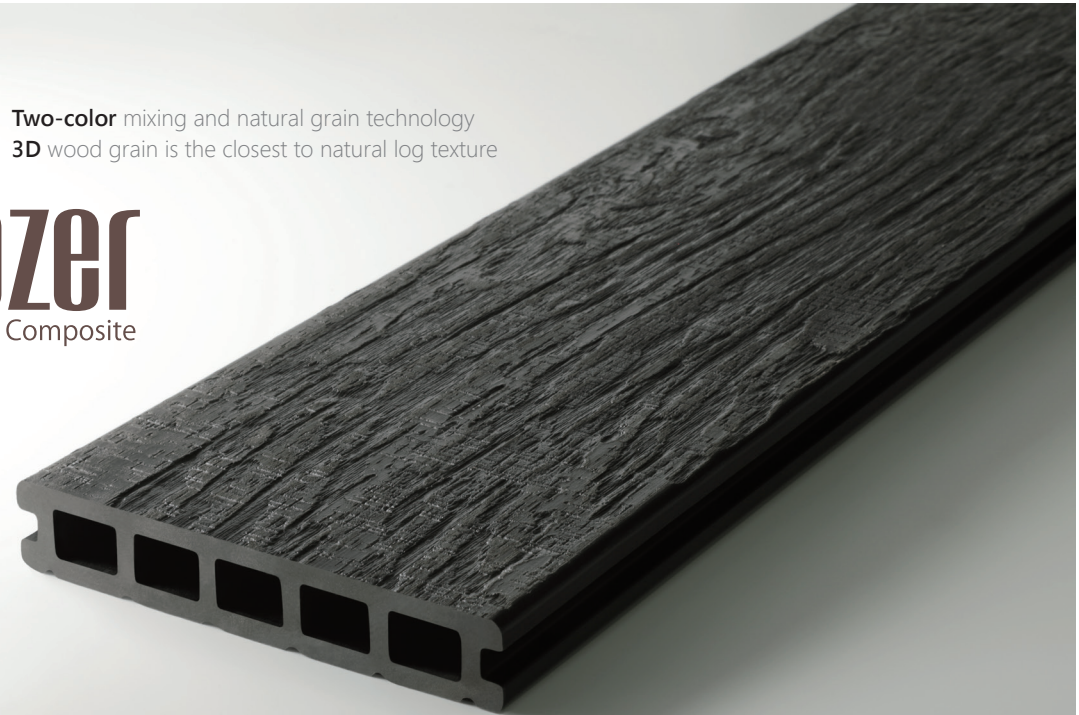

"Natural grain pattern"

We use later techniques for surface treatment: online embossing mode and natural rhyming color mixture. These techniques have the effects that make the grain more three-dimensional and natural and increase the effect of anti-slip obviously.

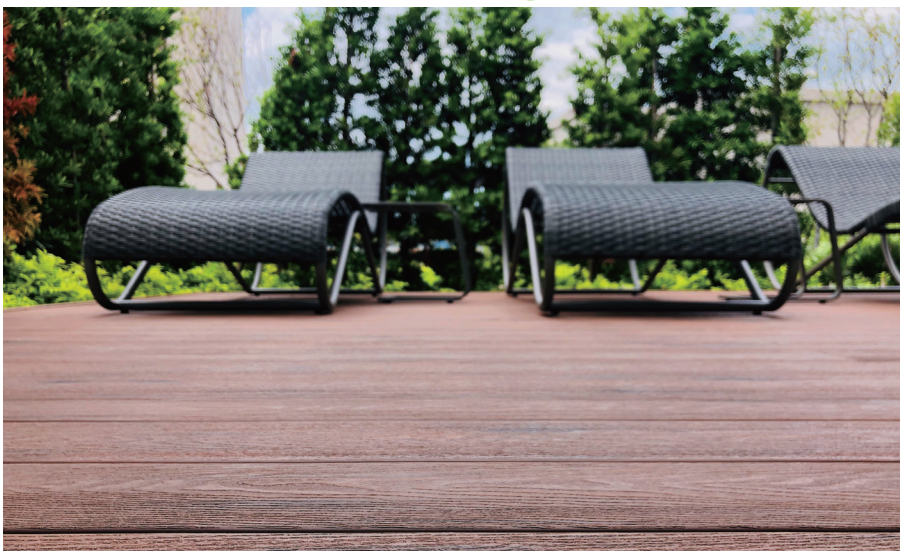

Two-color mixing and natural grain technology
3D wood grain is the closest to natural log texture

doozer
Wood Plastic Composite

Green building materials to embrace the pure life of nature

Applying the new technology "online embossing mode" and "natural rhyming color mixture," the resulting grain is more three-dimensional and natural.

"Natural Series" is an enhanced version of the "Classic Series."

It is produced with two-color mixing and natural grain technology, which makes each product with a unique appearance and characteristic, creating different levels of sensory enjoyment for you!

The materials of this series is the exactly same as that of the Classic Series, but the surface treatment is upgraded and more visually varied. The 3D grain creates a log-like feel with a natural texture similar to 95% of logs, and the anti-slip effect is also obviously improved.

The biggest competitive advantage of the "Natural Series" is that it enhances the appearance of the texture greatly, without increasing the cost of materials. Therefore, in the case of the overall poor environment of the construction industry, it is absolutely the best choice for customers who want to balance both appearance and limited budget.

"Natural Series" is acclaimed greatly in the UK and Taiwan markets, often sold out of stock.

Can I request for samples?

Yes, you can request for the samples of Doozer product free of charge completely. First of all, let us know what you need by following contact for more helps.
